DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Morishita (4931633) in view of Morishita(4902905).

Morishita discloses substantially the claim invention. However, Morishita does not disclose the restricting member in press contact with the front end surface of the pinion thereby to press the rear end surface of the pinion to the step of the pinion shaft so that the pinion is restricted from moving in an axially forward direction and an axially backward wherein the restriction member is resilient and have a ring shape with tapered surfaces.

Morishita discloses in fig.11-12 pinion arrangement for a starter motor comprising: a restricting member (47) in press contact with the front end surface of the pinion(24,25) thereby to press the rear end surface of the pinion to the step of the pinion shaft(A) so that the pinion is restricted from moving in an axially forward direction and an axially backward. The restricted member is made of a resilient material having a recess and tapered surfaces wherein the restricting member generates resiliency to contact radially inward when fitted in the recess so that the pinion is press axially backward by the

resiliency. Therefore, it would have been obvious to one having ordinary skill in the arts at the time the invention was made to modify the starter of Morishita with the pinion structure of Morishita for the purpose of reducing the axial dimension of the shaft.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 703-306-5855. The examiner can normally be reached on 8:00 to 4:30.
